Tidal Adjustment Table

The predictions given in the monthly tables are for Yaquina Bay. To determine the predicted time and height of high and low water for the locations given below, add or subtract the indicated times and adjust the heights. Tides for locations north of Newport generally occur later (add time) and tides for locations south of Newport generally occur earlier (subtract) than the tides given in the tables. The times of high/low water up river or up bay occur later than the times at the harbor entrance. Corrections for tidal heights are given in ratios.

Make sure you know when the tide is coming in so you don't end up stranded.

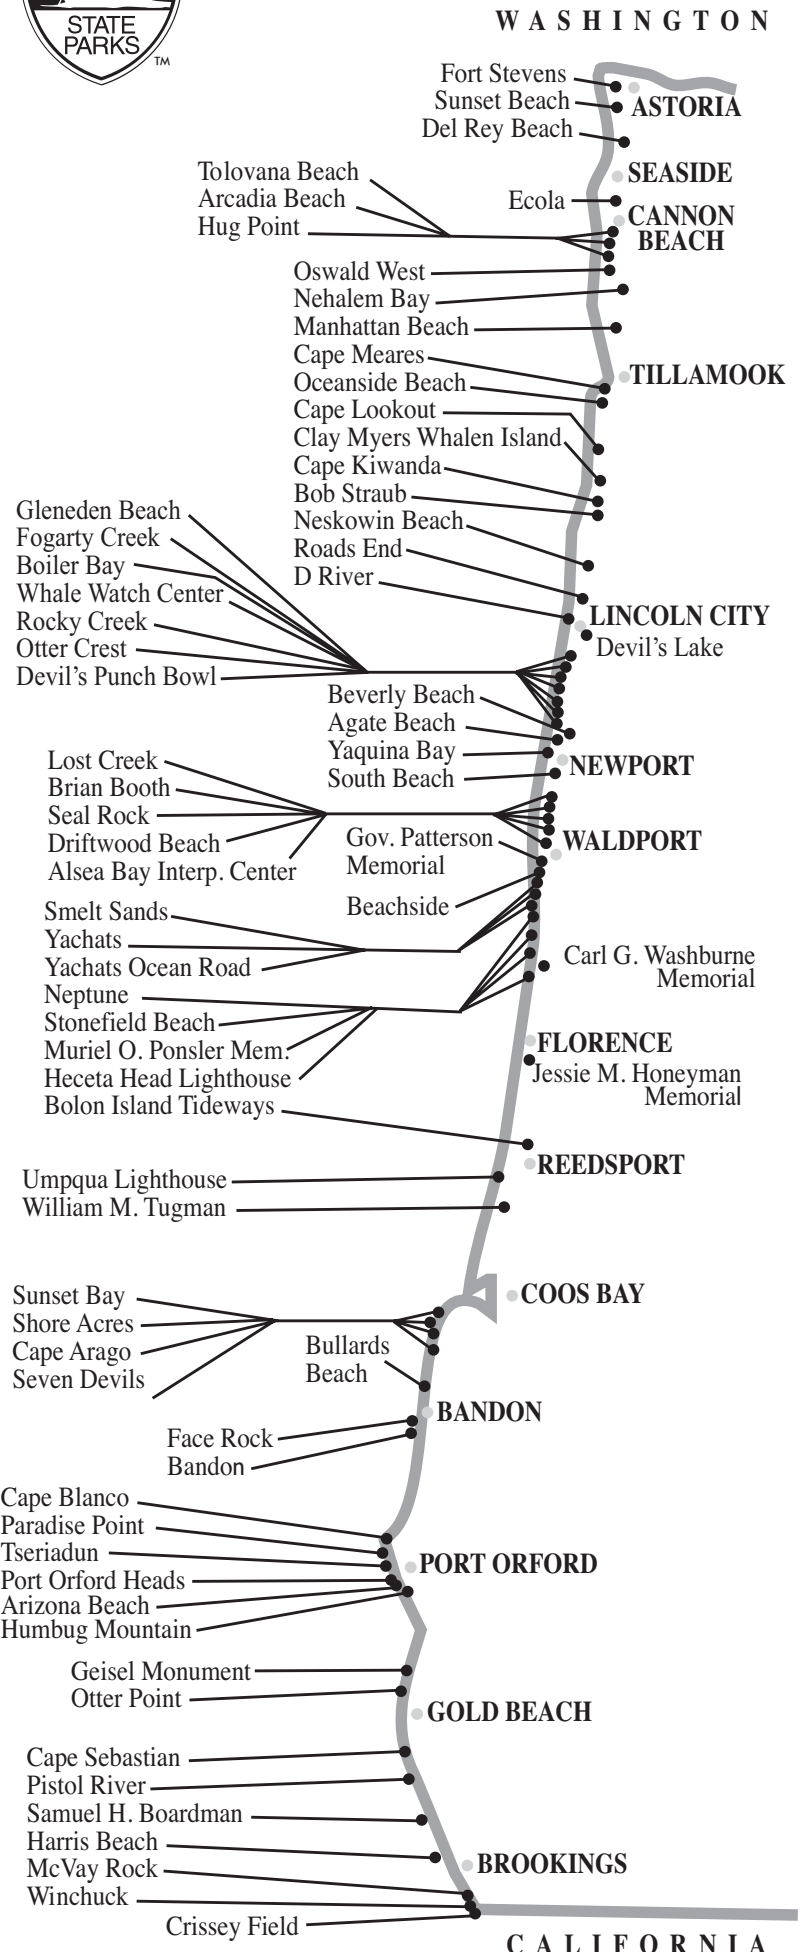

Watch out for rip currents! These strong currents can pull even the best swimmer out to sea. Watch for dark, choppy water filled with debris. If you get caught, swim parallel to the beach until you get out of the current.

Assume all cliff edges are unstable. Stay behind guard fences and railings, and stay on marked trails. Never walk under an overhanging cliff. Rocks can be slippery even when it isn't raining.

Don't turn your back on the ocean! Watch out for "sneaker waves." Sneaker waves appear suddenly and are impossible to predict. They often come rushing high up on shore with deadly force.
